In the first couple of runs before Z1784, we found that the CIGS films had poor adhesion to the Mo and peeled off either after deposition or later during chemical bath deposition of CdS. After optimizing the selenization time, all films later than run Z1784 showed good adhesion to Mo; 2) Composition control. Film composition was gradually adjusted to the suitable range for devices by adjusting the In and Ga source temperatures and deposition time (see composition changes from Z1779 to Z1783). Right now, we are able to consistently maintain our average...
